(a) one covariate
(b) two covariates
mean overshoot $(\widehat{K}_0^U - K_0)_+/n$
10^{-1}
10^{-2}
0.5
1
2
4
8
16
sample size n (thousands, log scale)
central zero region, constant effect
central zero region, effect grows with distance
strip zero region (two covariates), constant effect
theoretical slope $-1/(2\gamma)$
